Application-oriented R&D and bundled competencies for Battery Innovations

The development of cost-effective and high-performance batteries is not a linear process. By comparing and testing different technological paths, specific customer requirements can be considered, and an optimal solution can be found.

The Fraunhofer BatteryCampus Dresden/Freiberg provides central access to the broad technology and service offerings of the four Fraunhofer institutes IWS, IKTS, FEP, and IISB – all in one place and with the necessary expertise and infrastructure.

Our core competencies

- Thin Film Deposition
- Dry Coating
- Solid State Batteries
- Recycling
